Erster Kobelco-Minibagger mit iNDr wird in Europa eingeführt

Minibagger SK55SRX-6 nutzt hochmoderne Technologie

Kobelco hat die Einführung seines ersten Minibaggers mit der überlegenen iNDr (integrated Noise & Dust reduction)-Technologie der japanischen Marke angekündigt. Diese überlegene Methode der Staubfilterung in Kombination mit einer außergewöhnlichen Motorkühlung, die erstmals bei den kürzlich eingeführten Baumaschinen der SR-Klasse von Kobelco eingesetzt wurde, fördert das ökologische Wohlergehen und reduziert die Motorgeräusche auf ein extrem niedriges Niveau. So eignet sich der SK55SRX optimal für Arbeiten im Stadtbereich.

Mit der Einführung dieses neuen und hochmodernen 5-Tonnen-Minibaggers setzt die Kobelco Construction Machinery Europe BV (KCME) die Erweiterung ihres Maschinensortiments mit großem Tempo fort. Der in Japan gebaute SK55SRX verfügt zur Steigerung der Arbeitseffizienz und zur Senkung der Betriebskosten über eine Reihe an technischen Innovationen.
